Based on a template by Matteo Saccardi

- ★ Introduction

- ★ Methods

- ★ Conclusions

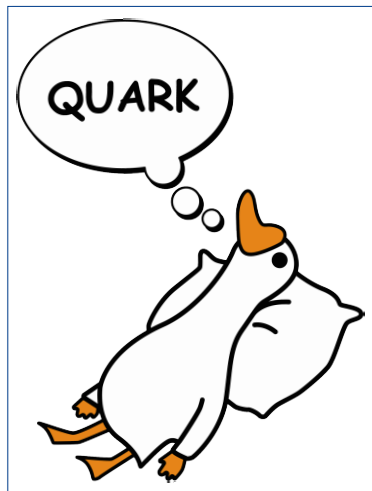

⇒ Introduction

★ Methods

★ Conclusions

- ★ QCD describes the strong interaction.
- ★ Lattice QCD gives access to non-perturbative observables.
- ★ Spectral densities require controlling an inverse problem.

A citation can be inserted as [Bruno et al. 2025], or with custom text as [MS et al. 2024]. For multiple references, use [MS et al. 2024, MS et al. 2026] and for references with multiple commas be careful to wrap them in brackets `{{text to show}}{ref:2026}}` e.g. [Bruno, Giusti, Saccardi 2024, Giusti, Saccardi, Toniolo 2026]

This sentence switches style when `\sethandwriting{true}` is used.

Handwritten note + equation

$$C(t) = \int_0^\infty d\omega e^{-\omega t} \rho(\omega).$$

★ Introduction

⇒ **Methods**

★ Conclusions

$$C(t) = \int_0^\infty d\omega e^{-\omega t} \rho(\omega)$$

- ★ The header follows the cleaner style from `config.tex`.
- ★ The footer keeps only author, short title, and current slide number.
- ★ Normal `\includegraphics` remains available.
- ★ Equations are automatically not numbered.

★ Introduction

★ Methods

⇒ Conclusions

- ★ The template separates style from content.
- ★ Outline frames and backup frames are not numbered.
- ★ The regular slide logo is set from this file.
